Main developer

COSMORATE ([Santoliquido et al. 2020](#)) written in Python, COSMORATE evaluates the astrophysical rates of compact object mergers and the evolution of their properties across cosmic time. It combines catalogues obtained through any formation channel with an observational-based prescription of the metallicity-dependent star formation rate. It is open source and available on GitLab at https://gitlab.com/Filippo.santoliquido/cosmo_rate_public

GALAXYRATE ([Santoliquido et al. 2022](#)) written in Jupyter Notebooks, GALAXYRATE is a unique tool for studying in an unravelled fast way the properties of host galaxies of compact object mergers with a minimal set of assumptions on observational scaling relations. It is open source and available on GitLab at https://gitlab.com/Filippo.santoliquido/galaxy_rate_open
